

Livestock Evacuation

**You've received an Evacuation Order.
Now what do you do?**

**Consider
how you will contain your
animals once at the relocation
site.**

**Electric fences pack up small
and can be powered by Solar
Panels, which make them a
great resource for this
situation.**

**For Commercial
Farmers who are unable
to relocate their animals
and have exhausted all
resources, contact the
Regional District of
Bulkley-Nechako for
assistance.**

**Make sure
you have spare
medications for your
animals in case they
become sick from the
stress of relocation or
from being mixed with
other animals.**

**Water is the most
important resource.
Make sure your
animals have plenty of
water and easy access
to it.**
